EDUCATION

Khoury College of Computer Sciences at Northeastern University, Boston, MA. **(Sept. 2019-December 2023)**
Bachelor of Science in Computer Science
Relevant Coursework:
Special Topics in Programming Languages, Special Topics in Data Visualization
Compilers, Programming Languages, Object Oriented Design, Algorithms,
Computer Aided Reasoning, Software Development, Networks

EXPERIENCE

Red Planet Labs Junior Developer **(2 years, 2024-August 2026)**
Clojure. Developed features on rama's developer platform. Developed the entire api server and react frontend for agent-o-rama, a langsmith/langgraph competitor for the JVM. Work was presented as keynote at clojure/conj 2025. Multiple companies in production are using my UI to debug their agents.

mge.tf Co-founder **(3 years, 2023-now)**
Javascript/svelte. Co-founded the fastest growing Team Fortress 2 league, in the 1v1 and 2v2 format, with over 4,500 signups, with divisions for North America, Europe, Asia, and players from South America, Australia, North Africa. Developed the initial website, funded the initial tournaments and ongoing development. Have permission from Valve software to distribute in-game medals for players.

Amazon Software Development Engineer Intern **(2 Months, 2022)**
Java. Fixed a long standing bug in Alexa backend system, then carried that change through internal build system coordinating deployments across two teams.

Cadence Neuroscience Engineering Intern **(6 Months, 2021)**
Python. Improved Data storage system, reduced file sizes by 50% and helped with general software engineering.

Data Visualization Lab at Northeastern Software Prototype Intern **(6 Months, 2020)**
Python. Created an interactive linkable tree viewer for the glue (github/glue/glueviz) open source data platform. Project currently being used in research and private projects.

Software/Hardware Development Contractor **(3 Months, 2019)**
Created prototype software/hardware solution for new Electric Vehicle project. Successfully designed schematic, laid-out footprints, and exported to manufacture PCB using kicad.

University of Washington Software Prototype Intern **(2018-2019)**
Created tablet app that allows for recording and cloud-based storage of motor disorder diagnostic drawing tests and JavaScript website for remote replay and diagnosis by clinicians. Currently in user trials. Published at EMBC Conference: 10.1109/EMBC44109.2020.9176044.

Microsoft Summer Software Internship **(2018)**
Created face recognizing IoT survey device demonstrating new Microsoft IoT technologies.
Developed an admin website in Angular to administer survey questions and view data.

SKILLS

Languages: Strong: Python (NumPy, Matplotlib, Pandas, Qt), JavaScript (React, React Native, Angular, Vue.js), Java, Lua
Clojure. Intermediate: Haskell, OCaml, Php, Arduino. Beginner: Rust
Operating Systems: Linux (10 years), iOS, Android, Windows (Azure), AWS

Interests

Long distance backpacking, competitive video games, biking, alternative keyboard layouts/input methods
